Iowa Orthopaedic Center, P.C., is among Iowa's premiere orthopaedic groups specializing in the care and treatment of the musculoskeletal system. As an Orthopaedic Center of Excellence, our physicians bring to Ankeny and surrounding areas, 51 years of communities in Iowa trusting physicians at Iowa Orthopaedic Center to provide exceptional medical care.

As a Center of Excellence, all of the orthopaedic surgeons are board certified or board eligible by the American Board of Orthopaedic Surgery, assuring patients they are receiving care from the highest qualified surgeons. The specialty of orthopaedics has consistently moved forward and is currently on the forefront of dramatic changes. The surgeons at Iowa Orthopaedic Center are leading the way in introducing these new techniques in Iowa. Iowa Orthopaedic Center physicians are leaders in innovative, state-of-the-art orthopaedic surgical techniques, including minimally invasive techniques, for spine, hip, and knee procedures. These new surgical procedures require a much smaller incision, resulting in less disruption and damage to the surrounding muscle and tissue, than previous procedures. The benefits to the patients are numerous including; less post-operative pain, reduced recovery times, smaller incisions and scars and shorter hospital stays. As leaders in the area of orthopaedics, Iowa Orthopaedic Center was honored to offer the first minimal access spine fusion surgery in Iowa.

Iowa Orthopaedic Center has achieved the privilege to be selected as the team physicians for The Iowa Cubs and all Drake athletics, including the Drake Bulldogs, for the past several years. The focus of the physicians and staff at Iowa Orthopaedic Center is to assist our patients to achieve the most active, productive lifestyle possible without pain or limitation. This is true for the many patients we provide treatment to ranging from the infant with a limb deformity, the adolescent who has sustained a sports related injury during a Friday night football game, the patient who has lifted a heavy object and injured his back, or the patient who has led an active lifestyle but has slowed down due to joint pain.
